Equipment familiarisation

OEM Training

As the original equipment manufacturer (OEM) we provide comprehensive equipment familiarisation training for our products including nitrogen pumps, fluid pumps, generators, and compressors.

Delivered by one of Prior Power Solutions' senior engineers, the training can be delivered at any worldwide location or at our manufacturing and testing site in Great Yarmouth, UK.

Delivered in small groups over a couple of days, certificates are provided to delegates successfully completing the course.

Safe operation of equipment

Understanding how to properly operate equipment reduces the risk of accidents, injuries, and damage. Proper training ensures that operators are aware of potential hazards and can help prevent accidents and injuries.

Minimise non-productive time

Familiarity with equipment is crucial as specialist equipment can be damaged if not operated correctly leading to costly downtime. Our training includes preventative maintenance tasks, which can mitigate NPT.

Safeguard valuable assets

Understanding how to properly operate equipment reduces the risk of accidents, injuries, and damage. Proper training ensures that operators are aware of potential hazards and can help prevent accidents and injuries.

What does it cover:

Our training can be tailored to your individual needs, and includes both classroom-taught and practical demonstrations with hands-on training

- ✓ **Introduction to the equipment and its main components**
- ✓ **Emphasis on health & safety**
- ✓ **Operating procedures**
- ✓ **Daily and routine inspections**
- ✓ **Preventative maintenance**
- ✓ **Troubleshooting**
