

# Over Pressurisation Skid

This over pressurisation skid, manufactured by Prior Power Solutions, is designed for all types of pumping and pressurisation operations, providing an enhanced level of additional safety and protection to the operator and the equipment being utilised.

This compact, robust unit can be set from 10 psi up to 20,000 psi and is designed to shut down fluid/nitrogen pumping units automatically once the operational pressure limits have been exceeded.

These skids are manufactured to operate in ATEX Zone 2 areas and can be easily retrofitted to existing equipment using standard type connections. For ease of moveability, these skids can also be fitted with forklift pockets.

## Features

- Robust, yet lightweight stainless-steel construction
- Easy to install and operate
- ATEX Zone 2 certified
- Ties into the shutdown system of the pump
- Minimal maintenance required
- Lifting handles and optional forklift pockets
- Pressure ranges: 10-10,000 psi  
75-15,000 psi  
10,000-20,000 psi
